

KUMAIL HAIDER

AI / MACHINE LEARNING ENGINEER

London, UK • +44 7922 950706 • kumail@kumailhaider.com • kumailhaider.com
linkedin.com/in/kumail-sp • github.com/kumail-sp

UK POST-GRADUATE VISA VALID UNTIL DECEMBER 2027 • FULL RIGHT TO WORK • NO SPONSORSHIP REQUIRED

PROFESSIONAL SUMMARY

AI Engineer shipping production ML, LLM, and computer vision systems for 2+ years. Currently contracting at Wellyx on predictive modelling and Agentic / RAG workflows, and co-founding LanguoLabs — an AI video dubbing platform deployed on GCP Cloud Run using Whisper, neural TTS, and FFmpeg pipelines. Strong in Python, PyTorch, FastAPI, and modern LLM tooling, with a track record of turning models into real product impact. Seeking a full-time AI / LLM Engineering role in London (open to UK-wide relocation).

TECHNICAL SKILLS

Languages & Frameworks	Python, PyTorch, TensorFlow, Scikit-learn, FastAPI, Flask
LLM & GenAI	RAG, Agentic AI, LangChain, LangGraph, OpenAI API, Whisper, vector retrieval, prompt engineering, LLM evaluation
Computer Vision & DL	CNNs, OpenCV, RAFT Optical Flow, model evaluation, feature engineering
Data & MLOps	Pandas, NumPy, ETL pipelines, experiment tracking, A/B testing, Matplotlib
Infrastructure	AWS, Azure, GCP (Cloud Run, Artifact Registry, Secret Manager), Docker, Firebase Hosting, Supabase, PostgreSQL, REST APIs, Git, CI/CD

PROFESSIONAL EXPERIENCE

AI Engineer (Contract) — Wellyx

Apr 2024 – Present

Remote • London — SaaS platform for gym and fitness operators

- Designed and shipped AI-driven marketing automation that contributed to a ~12–18% uplift in member re-engagement, measured against internal baselines.
- Built predictive models in PyTorch and Scikit-learn for user engagement and renewal probability, informing weekly retention decisions across thousands of active members.
- Prototyped Agentic AI and RAG workflows for decision support, turning unstructured operator data into automated insights.
- Exposed model outputs through FastAPI microservices integrated into existing production workflows, reducing manual intervention.
- Authored Python ETL pipelines (Pandas) for preprocessing and feature engineering, cutting training iteration time by 30%+.

Co-Founder & AI Engineer — LanguoLabs

2026 – Present

London — AI video dubbing platform; re-voices uploaded videos across 31 languages via an automated AI pipeline

- Architected an async FastAPI pipeline chaining Whisper (ASR), DeepL (translation), neural TTS, and FFmpeg (video rebuild), with job state tracked in Supabase and per-stage error handling.
- Containerised the backend (Docker, Python 3.12) and deployed to GCP Cloud Run via Artifact Registry; all credentials managed through GCP Secret Manager.
- Shipped a React + Vite + Tailwind frontend on Firebase Hosting with status polling and direct download of rendered output.
- Migrating TTS to ElevenLabs eleven_multilingual_v2 to enable accent-matched voice cloning — the platform's core differentiator.

Industry Mentor — Agile Delivery — London South Bank University

Feb 2025 – Apr 2025

London

- Mentored student engineering teams through sprint reviews, providing structured technical and requirements feedback.
- Improved delivery quality and reduced rework by tightening acceptance criteria and review standards.

Software Engineering Intern — Soft Steer Global Technology

May 2023 – Aug 2023

Lahore

- Built and maintained backend services in C# for a client-facing SaaS platform, delivering REST APIs and resolving production bugs to improve system stability.

KEY PROJECTS

Financial Distress Prediction via Computer Vision — MSc Dissertation

2025

- Designed a novel pipeline converting SEC 10-K financial ratios into image representations, applying RAFT Optical Flow to model year-on-year change as visual motion.
- Trained CNN and RAFT-based models reaching 93–95% accuracy and ~0.90 recall, outperforming tabular ML baselines.
- Produced interpretable magnitude and angle flow maps for earlier distress signal detection.

Tech: Python, PyTorch, TensorFlow, OpenCV, RAFT, Scikit-learn, Pandas

AI Researcher Agent — Agentic RAG for Career Intelligence

2026

- Built an agentic RAG system that ingests a CV, retrieves live market signals, and generates tailored skill-gap and role-fit recommendations.
- Implemented tool-use orchestration, structured LLM output, and retrieval over market-trend documents.

Tech: Python, LangChain / LangGraph, OpenAI API, vector retrieval — github.com/kumail-sp/AI_Researcher_Agent

EDUCATION

MSc Applied Artificial Intelligence — Distinction

Oct 2024 – Nov 2025

London South Bank University, London

BSc Computer Science

Jan 2019 – Mar 2023

University of South Asia, Lahore

CERTIFICATIONS

- Machine Learning Specialization — DeepLearning.AI (2025)
- Python & AI / Machine Learning Bootcamp — London South Bank University (2025)
